

Test Plan

Project

SauceDemo – Manual Testing

1. Introduction

This Test Plan describes the approach used for testing the SauceDemo web application.

The purpose of this document is to define what will be tested, how the testing will be performed, the testing environment, and the overall objectives of the testing process.

2. Project Overview

SauceDemo is a demo web application that simulates an online shopping platform.

The application allows users to:

Log into the system

Browse available products

Add products to the shopping cart

Remove products from the shopping cart

Complete the checkout process

Log out of the application

The application is designed for learning and practicing software testing.

3. Test Objectives

The objective of this testing effort is to verify that the core functionalities of the application work correctly and meet the expected requirements.

Special attention is given to:

User Login

Product Inventory

Shopping Cart

Checkout Process

User Logout

Input Field Validation

4. Test Scope

In Scope

Login functionality

Inventory page

Shopping Cart

Checkout process

Logout functionality

Out of Scope

Performance Testing

Security Testing

Load Testing

Database Testing

Mobile Application Testing

Reason:

The purpose of this project is to practice manual functional testing, not performance, security, or mobile testing.

5. Test Environment

Item	Details
------	---------

Application	SauceDemo
-------------	-----------

Browser	Google Chrome
---------	---------------

Operating System	Windows 11
------------------	------------

Testing Type	Manual Functional Testing
--------------	---------------------------

6. Test Types

The following testing types were performed during this project:

Functional Testing

User Interface (UI) Testing

Positive Testing

Negative Testing

Input Validation Testing

Smoke Testing

Basic Regression Testing

7. Test Data

Valid Test Account

Username: standard_user

Password: secret_sauce

Invalid Test Data

Invalid username

Invalid password

Locked user account

Empty input fields

8. Entry Criteria

Testing can begin when:

The application is available.

The test environment is ready.

Test cases have been prepared.

Test data is available.

9. Exit Criteria

Testing is considered complete when:

All planned test cases have been executed.

Any identified defects have been documented.

The Test Summary Report has been completed.

10. Test Deliverables

The following documents are produced during this project:

Test Plan

Test Cases

Test Execution Report

Test Summary Report

Bug Report

Application Screenshots

GitHub README Documentation

11. Risks

Possible risks during testing include:

Application unavailability

Changes in project requirements

Internet connectivity issues

Browser compatibility issues

12. Test Schedule

Activity Status

Test Plan Preparation Completed

Test Case Design Completed

Test Execution Completed

Bug Reporting Completed

Test Summary Report In Progress

Project Documentation In Progress

13. Roles and Responsibilities

The QA Engineer is responsible for:

Test planning

Test case design

Test execution

Defect reporting

Final project documentation

14. Conclusion

The SauceDemo application was successfully tested according to the defined test plan.

The following modules were tested:

Login

Inventory

Shopping Cart

Checkout

Logout

A total of 32 test cases were executed, and all of them passed successfully.

The application demonstrated stable functionality for the tested features, and no critical defects were identified during the testing process.
